

Microsoft Azure

CASE STUDY

MICROSOFT AZURE PARTNER:
FileCatalyst Inc.

WEB SITE: www.filecatalyst.com

MICROSOFT AZURE MARKETPLACE:
<https://aka.ms/AA1v0kh>

LOCATION: Ottawa, Ontario, Canada

ORG SIZE: 30-50 employees

MICROSOFT AZURE PARTNER PROFILE:

FileCatalyst is an accelerated file-transfer solution for large volumes of data, regardless of network conditions. Global organizations across diverse industries use FileCatalyst to solve file-transfer issues and accelerate workflows, including content distribution, file sharing, and migrating data into cloud-based object storage.

 **Microsoft** | Go-To-Market Services

Now, migrate large data sets to Microsoft Azure with file-transfer optimization to improve speed

“Our customers use Azure for many cloud-based workflows, but they all face the issue of transferring data into Azure quickly. The Azure Marketplace brings our fast file-transfer technology to these customers in a consumption-based model.” – Elton Carneiro, Director - Cloud Services, FileCatalyst

• SITUATION

When it comes to transferring large data sets to the cloud, maximizing speed is paramount, and network impairments may result in slow transfer speeds. FileCatalyst Inc., a Canadian company that specializes in accelerating and optimizing file transfers across global networks, was looking for a platform for its fast file-transfer technology. The company sought a platform with on-demand scalability and cost-effective pricing.

• SOLUTION

FileCatalyst chose Azure. FileCatalyst’s technology maximizes transfer speeds to Azure infrastructure and fully utilizes available bandwidth, regardless of the distance between the sender or receiver and the storage. The company’s patented UDP-based file-transfer protocol overcomes network impairments that limit file-transfer speeds across the wide area network. This results in a rapid way to migrate data to and from storage, whether it’s Azure Premium storage, Azure Managed Disk storage, or Azure Blob storage.

• BENEFITS

Microsoft Azure provides a platform for FileCatalyst to offer its users per-hour billing. Users can scale their virtual machine as needed within Azure.

Azure offers reliable, economical cloud storage for data, with a range of storage solutions and data redundancy options.
